

How do I deactivate Generative AI in Grammarly?

Paul Devine - 2024-08-16 - Moodle

Please note: if you are using Educational Grammarly provided by NMIT, Generative AI has already been deactivated.

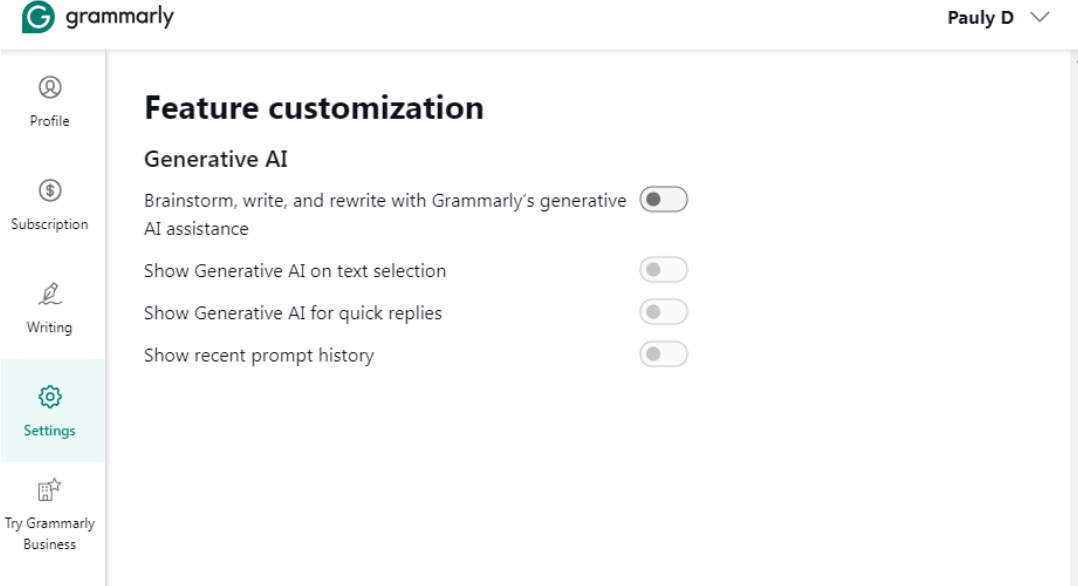

To deactivate Generative AI in Grammarly:

1. Go to MyGrammarly > Account > Settings > Feature customisation:

The screenshot shows the Grammarly web interface. At the top, the Grammarly logo is on the left and the user name 'Pauly D' with a dropdown arrow is on the right. A left-hand navigation menu contains icons and labels for 'Profile', 'Subscription', 'Writing', 'Settings' (which is highlighted in light blue), and 'Try Grammarly Business'. The main content area is titled 'Feature customization' and contains a section for 'Generative AI'. Under this section, there are three settings, each with a toggle switch and a checkmark icon to its right, indicating they are turned on: 'Brainstorm, write, and rewrite with Grammarly's generative AI assistance', 'Show Generative AI on text selection', and 'Show Generative AI for quick replies'. A third setting, 'Show recent prompt history', is also present with its toggle turned on.

2. Toggle Generative AI Features to off:

This screenshot shows the same Grammarly 'Feature customization' settings page, but with the Generative AI features turned off. The layout is identical to the previous screenshot, with the 'Settings' menu item highlighted. However, the three toggle switches for 'Brainstorm, write, and rewrite with Grammarly's generative AI assistance', 'Show Generative AI on text selection', and 'Show Generative AI for quick replies' are now in the 'off' position (greyed out). The 'Show recent prompt history' toggle remains in the 'on' position.
