

## Best student storage options

Want to save files and photos for your course at NMIT? Use this guide to decide the best place:

### **H: drive**

The H: drive on our network - otherwise known as Home or My Documents - is for limited emergency storage only. You may find you can't save your work there if your files have exceeded the 50mb size limit.

### **Memory Stick/Pen/USB drives**

Memory Stick/Pen/USB drives are convenient and small, but can easily get lost or fail, and are not at all secure (unless you encrypt them and then you may forget your password!).

### **Office 365 OneDrive**

OneDrive cloud store under your Office 365 is where you want to be saving your stuff as that gives you a massive **1TB** of file store plus the ability to easily:

- access your files from anywhere over the internet
- share files with others and edit them together in real time
- sync files and specific folders down to your own devices, including Macs and mobile phones

For further information on OneDrive:
