

How do I deactivate Generative AI in Grammarly?

Paul Devine - 2024-08-16 - Moodle

Please note: if you are using Educational Grammarly provided by NMIT, Generative AI has already been deactivated.

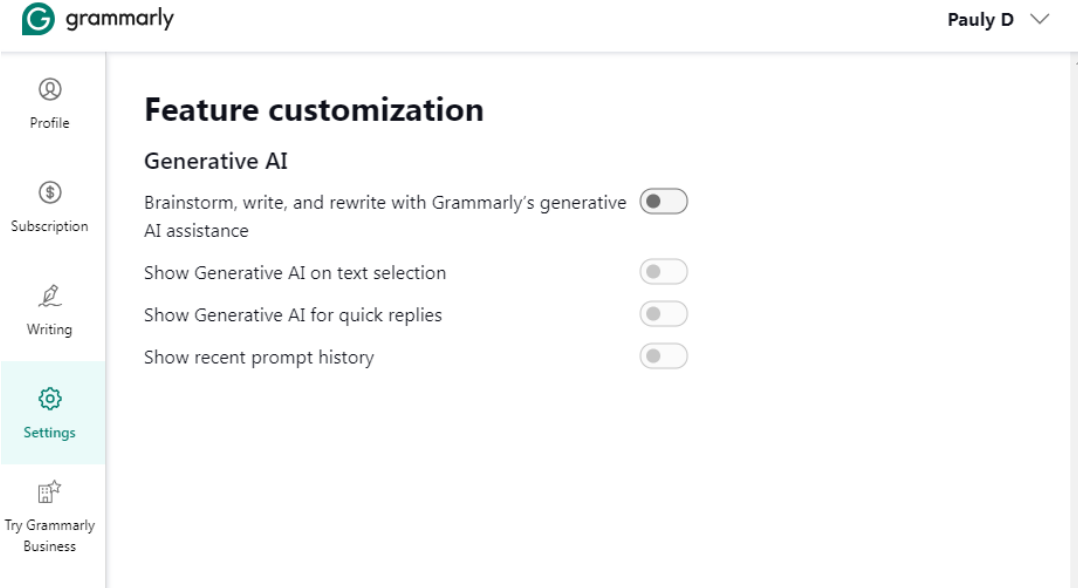

To deactivate Generative AI in Grammarly:

1. Go to MyGrammarly > Account > Settings > Feature customisation:

The screenshot shows the Grammarly user interface. At the top left is the Grammarly logo, and at the top right is the user name "Pauly D" with a dropdown arrow. On the left is a navigation sidebar with icons for Profile, Subscription, Writing, Settings (highlighted in light blue), and Try Grammarly Business. The main content area is titled "Feature customization" and has a sub-section "Generative AI". It lists three features, each with a green toggle switch that is turned on (indicated by a white checkmark): "Brainstorm, write, and rewrite with Grammarly's generative AI assistance", "Show Generative AI on text selection", and "Show Generative AI for quick replies". A third feature, "Show recent prompt history", also has a green toggle switch turned on.

2. Toggle Generative AI Features to off:

The screenshot shows the same Grammarly user interface as above, but with the "Generative AI" features turned off. The toggle switches are now grey and have a grey circle on the left side, indicating they are disabled. The three features listed are: "Brainstorm, write, and rewrite with Grammarly's generative AI assistance", "Show Generative AI on text selection", and "Show Generative AI for quick replies". The "Show recent prompt history" feature also has a grey toggle switch turned off.
