

How do I reset my student network password?

NMIT provides a self-service option enabling you to reset your own student network account password from off campus anytime, even if you have forgotten it.

Reset your password [here](#).

To use this service, you must first register a set of password security questions. We recommend you do this as soon as you have successfully logged in on a campus PC for the first time or activated your computer account on-line - and before you forget your password! If you have not set security questions, you will need to call 03 539 5068 for IT support.
