

What about my electricity bill?

Many families become concerned with the extra electricity costs because of having an international student living with them, especially in the winter.

Many of our students come from very hot countries and are sensitive to the cold.

Others may live in a country where it gets quite cold in the winter but the houses are always kept at a constant warm temperature inside with a central heating system.

Of course, your electricity bill will change with an extra person in the house but if your power account becomes extremely high, you may need to speak to your student to find out what is causing this increase.
